Elevating organizational performance excellence.

Lean Six Sigma Project Management Training

This course is designed to ensure project teams have the skills necessary to develop and effectively implement countermeasures to eliminate root causes discovered when applying the DMAIC methodology. Emphasis is placed on risk analysis, action plans, and determining project Return on Investment. Participants are also taught how to document results, standardize improvements, and identify opportunities for continuous process improvement. This course is the third of the three Advanced Yellow Belt courses which are prerequisites to enrolling in the highly acclaimed ets Green Belt Certification program.

The following concepts and skills will be learned and applied in this one-day program:

- Learn the five phases of project management and how to apply them to process improvement.
- Understand how project management supports the Six Sigma DMAIC methodology.
- Learn and apply the essential tools of project management including the five phases of team development, Work Breakdown Structure, Action Planning, and how to document Lessons Learned.
- Learn how to evaluate project effectiveness, including Return on Investment
- Understand the next steps necessary to register for the Green Belt Certification program.

Note: *There are no pre-requisites for this course; however, it is recommended that Yellow Belt and DMAIC are taken prior to Project Management.*

Only \$325 per person, or \$300 if purchased as part of the Advanced Yellow Belt series.

Includes manual and access to the ets Resource Library of digital forms.

Courses are offered in open regional settings and closed formats for large groups at the client's location.

97.9% Participant Satisfaction and 100% Completion Rate

"For us, process improvement is very important. Our first priority is safety and our second priority is to improve our processes. Lean Six Sigma methodology is a quality tool that we use to improve any process and can be applied in any industry. We use these Six Sigma tools to improve any processes in the hospital to make sure that we provide better care to our patients."
